

Intended Outcomes

RUBRIC outcomes will include:

- Research repository exemplar/s at a regional university site (USQ)
- Repository establishment and critical mass population at partner institutions
- Embedding repository services into research infrastructure
- Regional repository integration into national / international discovery services
- Platform for feedback into repository software development, ensuring regional deployment issues are covered
- Documentation for facilitating the dissemination and deployment of FRODO outcomes in a regional setting
- Documenting technical issues and resolutions
- Support mechanisms for implementers to share experiences
- Advocacy and promotional tools to assist uptake of repository infrastructure regionally
- Embedding workflows and support services in partner universities
- Promotion of and contribution to standards based approaches to information discovery, storage and sharing, benefits of which can be applied nationally
- Development of sustainability strategies in partner universities
- Articulation of repository systems with other university systems
- Understanding the relationships and integration issues between repositories
- Understanding the alignment between research and learning objects and issues surrounding their storage, curation, recombination and preservation
- Effective open linking between repository metadata and full-text resources
- Exploration of the non-technical issues to do with repository population, such as building human and organizational capability and the advocacy required to embed these technologies into the organization
